The Greenleaf logo is a trademark of Geo. Sheard Fabrics and designates fabrics in which the polyester content is 100% recycled. The recycling of polyester reduces the environmental footprint left from processing petroleum products into virgin polyester. The ensuing reduction in the energy required for the manufacturing process results in lower emission levels and less waste.

Long used as a material in construction and as a source of food, bamboo is gaining recognition in the home and contract furnishing industries due to its properties as a soft and breathable fiber. There are over 1000 species of bamboo on the planet, with some species capable of growing up to 1 meter per day. Its adaptability to different climates and precipitation levels, coupled with its 3-5 year harvesting period, which is significantly shorter than that of most softwoods, make it one of the world’s most versatile rapidly renewable resources.

Dyelots may vary slightly from samples shown.

**Cleaning Code Definitions**

**W-S:** Clean with water-based cleaning agents, foam or pure water-free solvents. (Energine, Carbonna, Renuzit or other similar products). Vacuuming or light brushing is recommended to prevent dust and soil build-up.

**Colour Fastness:** Colour fastness to light is the degree to which the fabric will retain its colour when exposed to light. Class 4 minimum at 60 hours is recommended for direct sunlight exposure situations.

**Note:** Colour Fastness results may vary from colour to colour.

Environmentally friendly fabric with a minimal environmental footprint.
